Intern with PC Construction

When you intern at PC Construction you build many invaluable skills and experiences—ones that cannot be taught or learned in the classroom. While your classroom experience will be helpful in guiding you along the way, it is the hands-on experience that provides you with the necessary skills to be successful.

Our Internship Program is tailored to each participant. Interns are placed at office and jobsite locations along the east coast on a wide range of diverse projects. On any given day, our interns can find themselves working with a mechanical piping crew on a $250 million water treatment plant, assisting a project manager on a complex healthcare facility, or working with subcontractors on a high-tech facility. Whether you are completing RFIs and submittals, working with subcontractors, owners, and engineers, assisting with estimating functions and bids, completing field labor work, or managing punchlists, you will be challenged.

If you are looking for a career in construction, PC Construction provides internship opportunities to help you achieve your career goals.
“I really enjoyed working on the George D. Aiken Center Expansion and Renovation project. My mentor was very good at explaining things clearly, showing me how to do them, and then watching me do trial runs to make sure I understood the process. I was given increased responsibilities as I learned along the way. I know that I will be able to use the knowledge I gained no matter what career I pursue. This internship at PC really opened my eyes to the different components involved in the construction of a first-class building.”

The 37,000 square foot renovation of the three-story George D. Aiken Center at The University of Vermont included the addition of a 2,300 square foot solarium. This project is pursuing LEED Platinum.
